

White Industries Bearing Press Compatibility Chart

The White Industries hub and bottom bracket bearing presses will work on any bearings as long as the bearing guide inner and outer dimension match the inner and outer dimension of the bearings you are trying to press in. It doesn't matter if the bearing is going in a hub, bottom bracket, suspension pivot, or whatever. The width of the bearing doesn't matter.

We can't list all the brands of hubs, bottom brackets, etc that our press will work with, but the list below covers most of our products. But remember, all you need to do to confirm compatibility is measure the inside and outside dimensions of your bearing and compare that to the guides included in the specific bearing press kit.
